github.com/Aniruth-raman | aniruth.me | Chennai, India

Software Engineer with 7+ years of experience building backend systems in Banking and FinTech. Skilled in Java, Kafka, Kubernetes, microservices, and CI/CD, with current work spanning Java/Spring cloud migration and SOAP-to-REST modernization.

Work Experience

HCLTech (Apr 2026 - Present)
Technical Lead *Chennai, Tamil Nadu*

- Preparing an on-premises Java/Spring application for Google Cloud Platform (GCP) migration by supporting its move from IBM WebSphere to Open Liberty, removing hard-coded secrets, and validating scalability.
- Updating a client-facing application to replace SOAP integrations with REST calls to external systems while preserving existing user-facing behavior.

Wipro Limited (Mar 2024 - Mar 2026)
Senior Software Engineer *Chennai, Tamil Nadu*

- Designed a Kafka-based KYC/AML screening service that decoupled sanctions checks from the account creation pipeline, processing batches of up to 250,000 accounts daily without impacting onboarding throughput.
- Replaced a third-party reporting vendor limited to 50,000 lines per month per client with an internal Kafka-driven reporting service, enabling unrestricted report generation and on-demand delivery through the bank's chatbot.
- Led the migration of 32 enterprise banking services from OpenShift to Kubernetes using Helm over a 6-month period, completing the production cutover in under 10 minutes with zero customer impact.
- Reduced production defect leakage by 28% across 10+ services by addressing technical debt with SonarQube and enforcing quality gates within CI/CD pipelines.

Tata Consultancy Services Ltd (Sep 2019 - Feb 2024)
IT Analyst *Chennai, Tamil Nadu*

- Migrated a 2,000+ test-case automation platform from synchronous JavaScript to asynchronous TypeScript, removing instability from a deprecated Fibers dependency and adding compile-time type safety.
- Drove framework adoption across 8+ teams by creating migration templates, resolving rollout blockers, and enabling program-wide standardization without disrupting ongoing delivery.
- Developed custom HTML email test reports with embedded failure screenshots, replacing Jenkins native reporting and reducing post-run triage time by 60%.
- Integrated the automation framework with Salesforce through a Jenkins webhook to publish structured test results, enabling a live dashboard used by 17 teams for daily pass/fail monitoring.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript
Frameworks: Spring Boot
Databases: Oracle, PostgreSQL, MongoDB
Cloud & DevOps: Google Cloud Platform (GCP), Microsoft Azure, Kubernetes, OpenShift, Jenkins, SonarQube
APIs: REST APIs, SOAP
Messaging & Architecture: Apache Kafka, Event-Driven Architecture, Microservices, CI/CD

Projects

Reddit LLM Moderation Service -- *Python, REST APIs, GitHub Actions*
GitHub: github.com/Aniruth-raman/reddit-llm-moderator

- Built an LLM-powered moderation backend for a live Reddit community, using confidence-scored decisions (approve above 80%, report above 90%, abstain otherwise) to minimize false positives.
- Automated hourly moderation workflows through GitHub Actions, enabling continuous operation without manual intervention.

Education

Birla Institute of Technology and Science, Pilani (Dec 2024)
MBA in Fintech

SASTRA Deemed University, Thanjavur (May 2019)
B.Tech in Information and Communication Technology
